Backend developer

Ivan Trubchaninov

Over 5 years of experience in e-commerce, 2 years working with high-load systems. I have successfully managed projects and development teams. I was actively involved in implementing and utilizing Agile methodologies, including task estimation and conducting retrospectives, to streamline development flow. I pay meticulous attention to the business side of projects and maintain a flexible approach to the selection of tools used.

I have experience in public speaking, participation in a hackathon, worked with a society for helping the disabled, taught programming and mentored.

Experience

○ 9/2023 - Present

Backend developer | Technology Company

High-load project utilizing DDD/CQRS, Kafka, and ClickHouse. Key focus areas include code review, system enhancements, and the migration of monolithic functionalities into dedicated microservice. Successfully implemented new code quality tools and automated contract generation processes using AI.

○ 10/2021 - 11/2022

Backend developer | Lovata

Developed and reviewed the code base for a project related to cryptocurrencies. Conducted task assessments. Work on company projects, such as websites and services. Additional, developed plugins for the shopaholic ecosystem.

○ 9/2019 - 9/2021

Tech Lead | Studioxy

Acted as a Technical Director in a small studio, overseeing various aspects of the development process. Evaluated project timelines and costs, and actively participated in the preparation of documentation and technical specifications. Led and managed the development team, conducting talent acquisition and recruitment for specialized tasks. Made informed decisions on technology stacks and toolsets for projects. Proficiently worked with Git, deploy processes, VDS configuration, and ensured smooth delivery of completed work to clients or presented intermediate results. Conducted thorough code reviews and provided essential project support, including hands-on development during critical situations. Designed application architecture and database structures to ensure optimal performance and scalability. Demonstrated a strong aptitude for comprehending the business aspects of new projects and actively sought out necessary integrations and potential partnerships to enhance project success. Additionally, integrated Atlassian's management system, utilizing Jira, Bitbucket, and Confluence to streamline project management and collaboration.

○ 2/2017 - 8/2019 | 10/2022 - 9/2023

Backend developer | EastIT

Supported the development and optimization of large-scale e-commerce platforms, managing product inventories of 7+ million SKUs by efficiently integrating and parsing complex supplier data. Reviewed and enhanced the codebase and server structures. Create and maintained the development environment in Docker. Developed internal tools, including a dedicated interface for 100+ call center operators built with Laravel and Asterisk, optimizing performance on a single server. Also developed an operator action logging service using Electron, enhanced the API for automated cloud calling, and supported sites on various CMS.
